ENGL 1010

Essay 4: Causal Analysis

Textbook Reading, Chapter 35 (pp. 350-54)

DUE: Monday, Nov. 26 (1A) / Tuesday, Nov. 27 (5B)

Please read the textbook chapters to *learn*—not to find answers to questions. Answer and explain in your own words what you learned.

CHAPTER 35

1. The chapter introduction talks about speculating about "probable causes" or "likely effects." As a researched essay, how will your causal analysis relate to this description?
2. What do you think might be a *primary* cause of climate change? What might be a *secondary* cause?
3. What do the textbook authors caution about *proving* causes or effects? What types of topics do you think this caution applies to more than other types of topics, and why?
